Jacki,

I am forwarding the email to Kyle--he's the air contact for EPA. I know he has been checking around on the monitoring to get suggestions on best way to collect data. I will call you in a bit and give you an update on my progress.

Kyle,

Can you cc me on your response to Jacki? I would like to stay informed on airs progress.

I will have a 1 hr test canister this week, I am wondering if I should do this test inside or outside of the house? It has been very bad this week, I had another cow die on Friday. She was on the ground with blood coming out of her nose, Steve had to put her down. It almost seems that what ever they are doing on the frack job behind us to the west comes right up through our foundation in the house. This morning it is a terrible strong diesel smell in the house, noticed it started last night. Went through all of Steve's work clothes and boots, thought maybe he brought something in. My Yorkie is sick, vomit and doesn't want to eat this week, her face is covered with this rash, blister like sores that are open and bleeding. I just had her to the vet for this several weeks ago, she was on anitbotics for 14 days. It had started to heal and she just broke out bad again this week.

I have noticed also we have large cracks in the ground showing up all over the yard.

Steve's mother lives in Williston, she was diagnosed with cancer this week, seems to be every day someone else. I go back for more tests in March.
